Scionics Computer Innovation

We are a young startup company that focuses on the organization, analysis and presentation of research results. We are located in Dresden, Germany, and work in close contact with the local research community and especially with the newly founded MaxPlanck Institute for Molecular Cell Biology and Genetics (MPI-CBG).
For our Bioinformatics Unit, we have an open position for a

Computational Biologist/Bioinformatician.

You are a young, enthusiastic scientist with a strong background in bioinformatics/computational biology and a sound knowledge in biology. One part of your responsibility will be to assist researchers with their projects in the areas of protein sequence and structural analysis, genome analysis and phylogenetics on a collaborative basis. You will also take part in the computational education of Pre-doctoral students during their studies.
The second part of your job will be to develop bioinformatics tools for the international research community together with our programming staff.
You are detail-oriented, self-motivated and you are a team-player.
Experience in programming languages (Perl, Python, C) are of advantage.
Scientific publications are encouraged.
